Pollution Prevention Policy & Environmental Goals

Elm Plating Company is committed to pollution prevention and environmental protection. Elm Plating's goal is to minimize adverse impact on the air, water, land and community through pollution prevention and energy conservation. By working toward this goal, Elm Plating can achieve cost savings, operational efficiency, and a safe and healthy workplace for our employees.

Recognizing that pollution may not necessarily occur at the point of manufacture, but many instead occur at the point of use or subsequent disposal, Elm Plating Company subscribes and supports source reduction, reduced toxicity, material reuse and recycling programs.

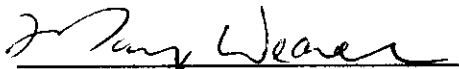

Elm Plating Company makes the commitment to meet all local, state and federal environmental legal requirements along with the approach of continuous improvement of our environmental performance programs that will aid in the development of systems that exceed minimum legal requirements and will periodically assess our Pollution Prevention Program.

Elm Plating Company's Environmental Management is among the highest corporate responsibilities. Environmental concerns must be an essential element of all functions of the management.

Elm Plating Company's Environmental Goals:

Elm Plating's Environmental Goals are incorporated within its ISO 14001 EMS system as well as Environmental Management Programs with responsible parties assigned, means of implementation activity and time frames.

- Eliminate the use of hexavalent chromium in the plating process.
- Reduce disposal of drums and skids
- Reduce water usage
- Reduce energy usage
- Develop closed loop plating program system
- Minimize emissions of wastes to environment
- Implement best available technology and encourage exchange
